

THE WORKING FOLDERS & THE STRUCTURES · A-PRIORITY · D-LITIGATION · Q-LITIGATION ·  
RE:ARCH · THE OPCO PROGRAMME · ARMADA BUILD

*Sixty-two workstreams, 64 gigabytes, 11,774 substantive file touches in one week — and beneath the velocity, four structures being built at once: a collection platform, two operating partnerships, and a construction company. This annex counts the work, names the forks and the dead weight, and states plainly what has actually been agreed with anyone. The answer to that last question is: nothing.*

ANNEX 01 · WHERE THE WORK WENT

# Sixty-two folders, one week.

Full recursive census of Misc-Working's three priority trees, NZT-aligned, with the 31 Aug boilerplate sweep (42 auto-rewritten files across 29 folders) subtracted – every number below is substantive work.

The week belongs to **Armada-Structure**: 3,914 substantive touches against a prior weekly rate of 95 – a forty-fold surge, effectively a new build, and it is where the OpCo papers, the partner packs and the four restrikes of 1 September live. Three more fronts ignited from nothing: **Parsons-Green** (1,322 files against 5 in the prior three weeks), **social-calendar** (994 files, all created this week) and **ReArch-collection** (1,582 against 39).

The decelerations are as telling. **Reference-Library** dropped from a 1,138-a-week ingest rate to 765 as the load settles; **GODS-EYE** from 551 to 224; and **Lowthers-Negligence** collapsed from a 4,062-file discovery ingest to 36 – the bundle landed, the reading has not started.

| TREE                  | STREAMS | FILES  | SIZE     | WK (SUBST.) |
|-----------------------|---------|--------|----------|-------------|
| A-PRIORITY            | 57      | 30,594 | 53.85 GB | 11,120      |
| D-LITIGATION-PRIORITY | 4       | 4,435  | 9.49 GB  | 145         |
| Q-ACTIVE-LITIGATION   | 1       | 1,638  | 1.11 GB  | 509         |
| Total                 | 62      | 36,667 | 64.45 GB | 11,774      |

*Classes across the 62: ten HOT, twelve WARM, two barely live – and **38 folders with zero substantive touches**, of which nine are strictly dormant (nothing in 30 days). Litigation's live fronts this week were Police-Stopsign (509 touches, output high-water #986) and Babich RC Fees (95).*

*Work-product vs plumbing in A-PRIORITY: 41 folders / 50.5 GB / 10,315 touches of real work against 16 folders / 3.4 GB / 805 of tooling and caches.*

ANNEX 02 · DEAD WEIGHT, FORKS AND DOUBLES

# The estate is heavier than the work.

*14.3 GB – nearly a quarter of the audited estate – sits in folders that did no substantive work this week, and the same matters live in competing copies that are drifting apart.*

THE SHARPEST DEFECTS

|                           |                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>TERRA fork, live</b>   | Two TERRA-Negligence folders share one numbering series (both at #060). The D-tree copy carries <i>_STALE-DO-NOT-USE.md</i> and a fork notice – <b>yet 14 files were written into it this week, including the entire insurance-critical exhibit set</b> (EXHIBIT-INS-01...04, 28 Aug). Work is being filed into a folder that declares itself stale. |
| <b>Conflicted copies</b>  | Six Dropbox "conflicted copy" files – five in Lowthers-Negligence dated 25 Aug, including the litigation review doctrine held in both a Brandon Morley and a Farhad Moinfar version side by side. Two people edited the same doctrine file simultaneously and neither copy has been reconciled.                                                      |
| <b>Duplicate evidence</b> | The 13-file QV OIA response exists byte-for-byte in both CCC-Mcleans_Rates (D-tree, now cold) and MCLEANS-MASTER (A-tree, live) – identical sizes, identical timestamps. One is the record; the other is a trap for a future citation.                                                                                                               |
| <b>Colliding numbers</b>  | The NNN series is not globally unique: #027 appears in both Armada-Structure and Armada-Fields, #076 in both Armada-Fields and Budget-Uplift, #060 in both TERRAs. A number without its folder is now ambiguous.                                                                                                                                     |
| <b>Fan-out ×3–4</b>       | Doctrine writes each numbered output to three to five paths (outputs, internal, reports, _llm mirrors). One <i>Castra</i> handoff note occupies five slots; three <i>Audit-Filesystem</i> reports occupy 22. The single largest inflator of file counts in the estate.                                                                               |

DEAD WEIGHT — ZERO SUBSTANTIVE TOUCHES

|                                   |                                                                                                               |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>mcleans-active-workstreams</b> | 5.83 GB · 1,931 files · highest McLeans numbering (#251) — the largest McLeans store, cold since 24 Aug       |
| <b>Armada-Fields</b>              | 1.36 GB · cold since 12 Aug                                                                                   |
| <b>FM-WEBREVIEW</b>               | 1.06 GB · cold since 21 Aug                                                                                   |
| <b>RYU-PIPELINE</b>               | 371 MB — ~290 MB of it redundant: one image set held twice plus two zips duplicating their own unzipped trees |
| <b>Zips beside their trees</b>    | <i>Police-Stopsign.zip</i> 335 MB (stale, 21 Jun) · <i>OKComputer.zip</i> at A-PRIORITY root                  |

SIBLING SPRAWL

*Armada: seven live siblings plus a rebrand backup — GTM (32.2 GB, 60% of the whole A-tree by bytes) and Structure hot, five cold. McLeans: three competing A-tree folders. Babich: five folders across two trees. RYU: four. A recursion trap exists at Misc-Working/A-PRIORITY/Misc-Working/.*

ABANDONED MATTERS, OLDEST FIRST

*Courtenay chiropractic — statutory demand drafted to #095, then stopped, 10 Aug. Budget-Uplift (10 Aug), Kakapo childcare (11 Aug), the four cold Armada siblings (12 Aug), LIGHTSPEED-AUDIT (13 Aug), *Castra* guarantee (25 Aug). Each holds a decision someone stopped making.*

## ANNEX 03 · THE COLLECTION PLATFORM

# RE:Arch turned to face McLeans.

*The most file-active workstream in the estate this week – restructured, its concept paper closed at v10, and its centre of gravity moved from the four Christchurch editions to McLeans heritage research.*

## — What moved

The control plane was collapsed on 31 August from fourteen documents to four (D-023), and the decision register ran from D-018 to D-032 in under a fortnight – eleven of the fourteen new rulings landing on 31 Aug–1 Sep with FM personally in session both days.

**D-024 closed the Master Concept Paper at v10** – 52 MB, full provenance, never edited in place. The founding-partner deck is superseded: "recoverable for ideas; never for framing."

### **D-028 is the ruling that changes the proposition:**

McLeans is a major Citadel project with its own strategy – RE:Arch is an adjacent platform that will hold a permanent home in the Mansion *as one occupant*, and its abstract functions are not to colonise the building programme. That reverses the earlier "mothership" framing outright. Meanwhile the real work went to 70-RESEARCH: the McLeans research session built the largest verified body in the programme – a 735-row fact ledger, a 52-entry adjudicated contradiction register, a 551-row sourced chronology running 1819–2026, some 300 actors, 16 transcriptions.

The one Collection output of the week was a **decline** – 29/868 Colombo St ruled out as a CH–004 edition (complex ceiling \$530k against the Capital Paper's \$850k with no comparable; a 70% short-stay model likely non-complying) – and the analysis caught a **\$65,217 GST overstatement** in the Capital Paper on the way through. The first real numeric underwriting output the platform has produced, and it said no.

## — What it cost, and what's still open

The 28 Aug bootstrap "materialised" the source tree and copied **205,759 files – 98.2% of them npm packages** – plus a stale 621 MB copy of live Armada-Structure. It has been cleaned (workstream now 1.2 GB / 476 files; a 2 GB archive awaits FM's disposal ruling), and the episode minted the doctrine line "a derivative work product is never a source."

FM also caught **the fourth false assurance in the control record**: "the public Replit site is live" propagating into an external document when the site is password-gated – new rule: assert on returned content, never on a status code. Still open: server-side auth (AUTH-001, next slice, not started), render provenance, the CH–003 demolition call, and a CI collision where two workflows fire on the same trigger.

### THE UN-PROMOTED DOCTRINE

Ten new doctrine rules were minted this fortnight – planning stops, point-never-copy, the move-vs-copy test, one-page-note discipline ("a one-pager is an audit of the record") – and none has been promoted to group doctrine: Citadel-AI's MASTER-DOCTRINE has not been touched since 16 July. The learning is real and it is stranded in one lane.

*RE:Arch is absent from \_MASTER-TRACKER entirely (stale since 25 Aug), and the RE:Arch legal entity remains unresolved – sponsor Citadel Capital, asset holder Imperator Holdings.*

# Incentive becomes equity.

*The operating model for the Mansion is now fully articulated: no leases, no guarantees — operating partnerships bound, in FM's words, "not by leases, and guarantees and obligations, but by a shared, aligned vision."*

## — The mechanics, as ruled

Each operation — hospitality, design retail, art — runs in a joint OpCo held **50/50 between the PropCo and the operator** (D21: the PropCo holds, not Citadel, so operator profit flows straight to the building's balance sheet). The flip: under a conventional lease, landlord contributions are incentives written off; here the fitout is funded in the project cost, **owned by the PropCo on completion**, and the operator's contribution *defrags* that cost — pay-to-play, notionally \$500k Cazador, \$350k Someday, \$100k Foenander — converting **dollar-for-dollar into PropCo equity** at the \$1.00 occupier strike (consultants defer at \$0.75).

Rent is **turnover-pegged and capped at market**, with no floor — and for every dollar of rent the PropCo receives, the operator receives the same dollar as an executive management fee: the matched pair. Profit beyond that splits 50/50. The model's own invariance, proven across the worksheets: *PropCo total return = operator total return = cover ÷ 2, whatever base, whatever percentage, through the cap, through the collar.*

*Four instrument layers — OpCo equity, turnover rent, PropCo scrip, milestone equity — and the standing rule that they are never totalled. A percentage or a dollar without its instrument named is a defect.*

## THE TWO LIVE OFFERS — PREPARED, NOT SENT

|                          | CAZADOR (HOSPO)                                  | SOMEDAY (RETAIL)                                                |
|--------------------------|--------------------------------------------------|-----------------------------------------------------------------|
| <b>Vehicle</b>           | H-OpCo 50/50, whole-mansion exclusive            | Retail OpCo 50/50, 12-brand consignment                         |
| <b>Demise</b>            | 205 m <sup>2</sup> + 110.4 m <sup>2</sup> common | 188 m <sup>2</sup> + 101.2 m <sup>2</sup> common                |
| <b>Rent cap</b>          | <b>\$247,839</b>                                 | <b>\$246,287</b>                                                |
| <b>Turnover rent</b>     | 8.5% · no floor                                  | 8.709% derived · no floor                                       |
| <b>Stabilised profit</b> | <b>\$506,750 → \$478,625 each side</b>           | <b>\$180,867 → \$336,720 each side</b>                          |
| <b>Contribution</b>      | ~\$500,000 → 5.1% of the building                | \$350–500,000 → 3.6–5.1%                                        |
| <b>Status</b>            | OH013 rev F in FINAL — NOT SENT                  | OD048 in FINAL — NOT SENT; their 25 Aug fee proposal UNANSWERED |

## WHAT IS AGREED WITH ANYONE

**Nothing.** Both legal folders are empty. Neither OpCo exists; the PropCo does not exist; Someday is not locked (D15's condition is real and unclosed) and no NZ company bears their name; Cazador's correct entity is verified (519543) but holds no instrument. Three operators hold the 45-page Guiding Document from 28 Aug — told the direction, promised nothing.

*1 September alone: the ground-floor schedule restruct four times before FM's 18:36 lock (Someday north: turret + bay + room + trunk retail, 188 m<sup>2</sup>); commission set at 30%; the common rate moved \$600 → \$650 → \$675 in one day; the partner document rebuilt through seventeen output numbers after FM's twelve-point critique.*

## ANNEX 05 · RAVENWOOD · CUESKO · THE 27 AUGUST MEETINGS

# A handshake the record never caught.

*The construction structure was overturned at 13:44, pitched at 15:00 and 16:00, and accepted in principle by 20:31 – and the only record of that acceptance is a phone capture filed to the wrong matter.*

## — The overturn, and the vanishing ruling

B006 (26 Aug) had settled Ravenwood as a memo line – 12.5% inside Citadel's half, off the register. At **13:44 on 27 August FM overturned it**: Armada Build 50/50, Chancellor targeted (not approached) for one half, the other half a Citadel-led holding company held **four ways at 25% each – Citadel, Ravenwood, Cutfield, CPMC – real shares, on a register**. The consequence nobody has written down: Citadel's share of the construction entity fell from 37.5% to 12.5%. The ruling has **no D-number, no source capture** – it exists only in dispatch-ledger rows and inside the deck, whose files were still being rebuilt at 15:21, twenty-one minutes into the meeting they were built for.

The only outcome record is FM's 20:31 capture: *"onboard in principle (details to be worked out). They are excited to join our collective."* It was filed to Armada-Fields/ARMADA-TEAM – not to the build lane, which has not gained a single file since 27 Aug. No minutes, no transcript, no email to or from any party; the deck was never emailed to anyone. Chancellor and James Law: **still not approached as at 1 Sep**.

## — G3 got worse, and Rev H made it concrete

The Cuesko independence gate was ruled "CUESKO WITHOUT GREG" – Greg Cutfield's move is personal, the firm stays as the independent build-price check, *subject to asking Cuesko, which nobody has done*. But the person who crossed on 27 August was **Jono Cutfield – a serving Cuesko Senior Associate Director and the Cuesko hand on McLeans** – the exact failure mode the conversation brief predicted by name ("Jonathan will handle it, he is separate from me... a cost report signed *Cutfield* fails the test on the face of the signature"). Two Cuesko people are now on the build side; the gate still reads as if only Greg were moving; the deck offered the board seat to Greg and the yes came from Jono. Whether the two are related is inference and stays unasserted.

Then on 28 August the Guiding Document Rev H went to fourteen recipients **including both Cutfields and CPMC** – still carrying the superseded memo-line structure, naming Greg only, not disclosing the four-way holdco in which CPMC itself is a proposed 25% holder, and stating the independence conflict about Greg, to Greg and Jono, in writing.

### NOTHING IS CONTRACTUAL

The deck's own face: "Proposed and subject to discussion. Nothing agreed with anybody." Armada Build and the holdco do not exist; no consideration is recorded for any of the four holdings; "no entity can self-perform today." The in-principle handshake is real momentum – and it is resting entirely on one evening voice capture.

## ANNEX 06 · WHAT IS ACTUALLY WAITING ON FM

# Twelve decisions, priced where they can be.

*Drawn from every front in this annex — the items only FM can move, ranked by what they are worth or what they risk. The kind of list Rook will one day push as option cards.*

| #  | DECISION                                                                                                                                | WHY IT MATTERS / WHAT IT IS WORTH                                                                                                                                               | FRONT        |
|----|-----------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| 1  | Record the 27 Aug construction ruling properly — D-number, source capture, and correct the "Cutfield" ambiguity to Jono or Greg by name | A four-party holdco with three in-principle participants currently rests on one phone capture filed to the wrong matter                                                         | Armada Build |
| 2  | Re-open G3: ask Cuesko whether it will keep acting, now that Jono — not only Greg — has crossed                                         | Until asked, no document may claim an independent build-price check exists; every tender number inherits the doubt                                                              | Armada Build |
| 3  | Correct and re-issue the Guiding Document page 37 to all Rev H recipients                                                               | Both Cutfields and CPMC currently hold a superseded structure in writing; the board's own lesson — "every artefact carrying that fact is searched" — has not been applied to it | Armada Build |
| 4  | Release or hold OH013 (Cazador) and OD048 (Someday) — and answer Someday's 25 Aug fee proposal either way                               | Both packs are FINAL and unsent; the proposal has sat unanswered eight days while four restrikes refined a document they have never seen                                        | OpCo         |
| 5  | Delete the superseded OH003 Gmail draft when releasing anything to Cazador                                                              | Three drafts stand against the same two people; the stale one is flagged on the record as "the live hazard"                                                                     | OpCo         |
| 6  | Separate consideration for the OpCo leg from the scrip leg — the double-count trap                                                      | No document separates the two amounts; after D21 both legs settle on one balance sheet and the netting is invisible                                                             | OpCo         |
| 7  | Rule R136 — common-area pool vs factor                                                                                                  | <b>\$55,695</b> of divisible profit swings on it                                                                                                                                | OpCo         |
| 8  | Rule Phase 04 cultural programming perpetual vs term-limited                                                                            | Capitalising it wrongly is a <b>\$1,548,387</b> error                                                                                                                           | OpCo         |
| 9  | Cap the executive management fee                                                                                                        | Uncapped divergence reaches <b>\$52,161</b> at \$3.6m turnover — drafting-critical before anything is sent                                                                      | OpCo         |
| 10 | Kill the TERRA fork — one folder, one series                                                                                            | Insurance-critical exhibits were filed this week into a folder marked STALE — DO NOT USE                                                                                        | Hygiene      |
| 11 | Dispose or archive the 14.3 GB of dead weight and the duplicate QV evidence set                                                         | A quarter of the estate is drag; one of two identical evidence copies will eventually be cited stale                                                                            | Hygiene      |
| 12 | Promote the fortnight's doctrine — the ten RE:Arch rules and the one-page-note standard — to Citadel-AI group doctrine                  | MASTER-DOCTRINE untouched since 16 July while the estate's best operating lessons sit in one lane                                                                               | RE:Arch      |

*A thirteenth, standing: nothing in this annex is agreed with any counterparty — no OpCo, no PropCo, no holdco, no SHA, no engagement letter exists anywhere in these trees. That is a strength while it is deliberate and a risk the moment anyone believes otherwise; the cap table's own "IN" column already reads as subscribed when nothing has been subscribed.*

# ANNEX

*The working folders and the structures — companion to the Seven-Day Pulse of 1 September. Counted from the file system itself; quoted from the record verbatim; absences marked as absences.*

Compiled from a full recursive census of 62 workstream folders (54 enumerated completely, 8 sampled and marked as lower bounds), the boards and changelogs of the Armada-Structure and McLeans lanes, the RE:Arch decision register D-001–D-032, calendar and mail verified directly, and the companies register as searched 25–31 August. Register facts should be re-checked before reliance. Where the record contradicts itself — the stale Cazador contact line, the board trailing the lanes by five documents, two TERRA folders on one numbering series — the contradiction is reported, not resolved.
